

NOTES ON CONTRIBUTORS

Professor Anthony M Martin is a retired Consultant Physician and Nephrologist. He developed a taste for the soils and trees of Wester Ross-shire after an encounter with the Inverewe Gardens there in 1971. More recently he has contributed to the literature and teaching of the Royal Botanic Gardens in Edinburgh.

Susan Freeman is the second of the 4 children of Joyce Watkin (Harold Watkin's daughter) and is married with 2 sons. She trained as a Textile Technologist at Manchester University and after working in Research and Development in the Textile Industry retrained as a teacher. She is currently employed as a teacher of Design technology at the Belvedere School in Liverpool. In her spare time she judges trampolining and is the British Gymnastics North West of England Trampoline Judging Secretary and has written a book about trampolining to be published in early 2008. Over the last few years she has given many presentations to local interest groups about the life and work of Harold Gladstone Watkin.

John Stewart is Professor of the History of Medicine and Social Policy at Glasgow Caledonian University. He researches in areas including the history of child guidance, social welfare in Scotland, and inter-war municipal medicine. His work has appeared in journals such as *Medical History*, *Bulletin of the History of Medicine*, and *Twentieth Century British History*. A piece by him on Emyr Wyn Jones, entitled 'A Welsh Life, A Medical Life: Dr Emyr Wyn Jones (1907-1999)' appeared in *The National Library of Wales Journal*, XXXII, 1, 2001.

Mark Weatherall experienced the unreconstructed Medical Sciences Tripos at Cambridge in the late 1980s, before becoming a historian of medicine. His work on the history of the medical sciences and medication has appeared in *Medical History*, *Social History of Medicine*, and the *Journal of the Royal College of Physicians*. His monograph, *Gentleman, Scientists, and Doctors. Medicine in Cambridge 1800-1940*, was published in 2000. He returned to medicine in 1995, and is currently a locum consultant neurologist to the Royal Free Hospital and the East and North Hertfordshire NHS Trust.

Abigail Woods began her career as a veterinary surgeon. She went on to study the history of science, technology and medicine at Manchester University, obtaining her PhD in 2002. She is the author of *A manufactured plague: the history of foot and mouth disease in Britain, 1839-2001* (Earthscan, 2004). She is currently lecturer in the history of medicine at Imperial College London, and continues to research the field of veterinary history.
